**Background information and Pro-tips:**

**Recycle plastics by TYPE, not by NUMBER:** Numbers are outdated and misleading. They were not created to tell the general public whether something is recyclable. They stand for which resin is the primary ingredient in the plastic. Many #1’s—like clamshells and deli containers—have other materials mixed in, which melt at different temperatures, making them unrecyclable.

**Plastic containers:** These types of plastic have no value in today’s recycling markets. They are considered contamination and can cause a whole load of acceptable plastic (bottles and jugs) to be rejected and taken to the landfill. **This also costs us $$!!**

**Plastic bags & film:** **NOT** recyclable in your Plastic/Cans bin because they get caught in the sorting machinery. They **ARE** recyclable in the **Plastic Bag bin** at grocery stores if they are **clean and dry**. Take them to QFC, Safeway, and the Food Co-op where they will become plastic lumber.

**Batteries:**
- Alkaline batteries are considered safe to put in the trash. They are **NOT** recyclable.
- Lithium, button, and rechargeable batteries can be recycled at the HHW facility at the Boat Haven (see address above). These are **FIRE HAZARDS** in the landfill!

**Compact fluorescent bulbs and tubes:** They can be dropped off locally at the Jefferson County Recycling Center, HHW facility, and the Quilcene Drop box Facility. **DO NOT** put them in glass recycling. Due to their mercury content, they are hazardous waste!
